

Jack Jeffery

Computing & Digital Technologies Student

Profile

Motivated first-year Computing student with hands-on experience in front-end and back-end development, Data science, Cybersecurity, and Networking.

Passionate about building secure, user-friendly applications and extracting insights from data. Seeking a placement or graduate role in data analysis, or IT security & Networking.

Technical Skills

C#	Python	HTML5/CSS3
JavaScript	Bootstrap	
Python Packages (Pandas, NumPy, matplotlib scikit-learn, discord.py, discord.py-self)		
SQL	MySQL Workbench	
Railway (TCP proxy)		
Git/GitHub	VS Code	
Figma	Cisco Packet Tracer	
VLAN/OSPF	OWASP	

Education

BSc (Hons) Computing and Digital Technologies

University Centre Somerset | 2025 – 2028 (Year 1)

Modules: Programming & Software Fundamentals, Web Development, Cyber Security, Networking, Data Science, Professional Skills.

Key Projects

E-commerce Database & Sales Prediction (SCDV45)

MySQL, Python, Pandas, scikit-learn, SQLAlchemy

Designed a relational database (Customers, Products, Orders – 50+ rows). Wrote advanced SQL queries (window functions, subqueries). Built a linear regression model ($R^2=0.997$) to predict order value.

Unicorn Badminton Club Website Redesign (SCDV42)

HTML5, CSS3, JavaScript, Bootstrap, Figma, Git

Mobile-first responsive redesign, dark mode toggle, Successful deployment of a website, Lighthouse performance score 94. Fixed accessibility issues and replaced unlicensed images.

Bright Future Charity Risk Assessment (SCDV43)

OWASP Top 10, MFA, IDPS, risk matrix

Achievements & Certifications

- Website Deployment – Lighthouse performance (94/100)
- Completion of self-paced netacad networking courses
- Active GitHub contributor – consistent commit history across 5 modules
- Designed and deployed a Discord bot that systematically collected over 4,000 records of structured profile data (Discord ID, Roblox ID, username, confidence score) into a cloud-hosted MySQL database

Links

 [Github.com/JackUCS](https://github.com/JackUCS)

Identified broken access control and cryptographic failures. Proposed MFA, employee training, and IDPS (Suricata) to prevent ransomware.

Dropship Two-Site Network Design (SCDV44)

Cisco Packet Tracer, VLANs, OSPF, IPsec VPN

Designed secure network with VLAN segmentation, site-to-site IPsec VPN, and router-on-a-stick. Chose OSPF over RIP for faster convergence.

Enterprise Network Services with Active Directory

Windows Server, VirtualBox, DNS, DHCP, Group Policy

Designed and deployed a complete corporate network on a virtual machine, transforming a standard Windows Server into a fully functional Domain Controller. Centralised user authentication and policy management for a simulated business, effectively integrating core network services (DNS, DHCP) with Active Directory.

Cloud MySQL Database (Independent)

MySQL, Railway (TCP proxy), Git, SQLTools

Deployed a relational database on Railway for Roblox profiles. Wrote optimised queries for duplicate detection and confidence scoring.
